EXPERIENCE

ShuffleUp Technologies OÜ (Remote)

Platform Engineer

Tallinn, Estonia

Sep 2024 – Present

B2B2C eSports and online-gambling platform serving 100k+ concurrent users under EU gambling regulation.

- Deployed Cilium on the production cluster (eBPF datapath, kube-proxy replacement) and wrote L3–L7 NetworkPolicies segmenting payment and PII services
- Deployed Falco (k8saudit plugin on the Kubernetes audit webhook) with custom rules for exec into production pods, privileged containers and secret access, routed to Loki/Grafana via falcosidekick, plus Tetragon for process-level enforcement
- Implemented GitLab CI/CD pipelines with integrated security scanning (SAST/DAST), automated builds, and GitOps deployment workflows, ensuring ISO 27001:2013 compliance for EU gambling regulations
- Architected data compliance infrastructure on PostgreSQL Anonymizer 2.0 with dynamic masking, static anonymization, role-based access and automated PII detection

Stack: Cilium/Hubble · Falco · Tetragon · GitLab CI/CD · PostgreSQL Anonymizer · Crossplane · Ansible · Kubernetes · Python

Royal Caribbean Cruises (Asia) Pte. Ltd (Remote)

Software Engineer

Singapore

Mar 2023 – Present

Singapore arm of Royal Caribbean Group (booking, events and guest-experience systems).

- Wrote a Kubernetes CNI plugin in Go (netlink: veth, IPAM, routes) that steers pod traffic into HTB classes via tc flower, guaranteeing database workloads 100 Mbps under contention
- Diagnosed and fixed in-cluster congestion (queue drops, retransmits) using tc -s qdisc, ss -ti and Prometheus netstat metrics
- Traced ship-to-shore sync stalls over Starlink (about 75 ms RTT) to PMTU blackholing on the VPN tunnel and fixed them with TCP MSS clamping, roughly halving sync failures
- Optimized CDN edge caching for image assets via CloudFront, reducing load times from 800 ms to 50 ms

Stack: Go · netlink · tc (flower · HTB) · Kubernetes · Grafana · Prometheus · CloudFront · Docker · Terraform · Ansible

Desupervised ApS (Remote)

Software Engineer

Copenhagen, Denmark

Mar 2023 – Present

Nordic AI research company and Eurostars R&D grant recipient, working on demand forecasting and drug discovery.

- Administered Unix-based systems for ML research environments, optimizing performance for GPU-accelerated computing
- Replaced cron-driven forecasting runs with Ray Jobs on a KubeRay cluster on AKS with autoscaling spot GPU workers, so researchers submit training and forecasting pipelines on demand
- Redesigned the time-series schema on TimescaleDB hypertables, cutting aggregate query latency from 750 ms to 150 ms (5×)

Stack: Ray/KubeRay · Kubernetes · Azure · Terraform · Ansible · Docker · Jenkins · Python · FastAPI · PostgreSQL/TimescaleDB

Telkom University Research Group (Yayasan Pendidikan Telkom)

Machine Learning Engineer

Jakarta, Indonesia

Sep 2021 – Mar 2023

Research team providing MLOps tooling for skin autoimmune disease detection models.

- Partitioned the group's shared DGX A100 (8× A100) into MIG instances and scheduled jobs through Kubernetes with the NVIDIA device plugin, replacing SSH-and-nvidia-smi access for 50+ researchers
- Profiled stalled training runs with nvidia-smi dmon, the PyTorch profiler and bcc tools, traced them to dataloader and NFS I/O, and fixed the data path
- Streamlined the data pipeline from legacy SPSS to Google Cloud AI infrastructure
- Put the legacy SPSS model-conversion scripts under version control (SVN) with the audit trail medical research data requires

Stack: Kubernetes · NVIDIA device plugin · MIG · PyTorch · bcc/eBPF · Google Cloud · SVN

PROJECTS

GeNose C19 App – Universitas Gadjah Mada

ML Deployment & App Development

Government-funded

Jan 2021

- Deployed a machine learning model that screens for COVID-19 from GeNose sensor features
- Built web and Android apps communicating with the GeNose device over a Bluetooth serial connection

Stack: Google Pub/Sub · Android Studio · Java · ReactJS · PyTorch · Protobuf

EDUCATION

Institut Teknologi Bandung

Bachelor of Engineering, Informatics Engineering

Bandung, Indonesia

Aug 2016

- Thesis: Elasticsearch-based document search engine (AWS, Elastic Stack, Java, RabbitMQ)

ACHIEVEMENTS

BCA YoungHackR 2020 – 3rd Place (National)

Hackathon

PT Bank Central Asia

Feb 2020

- Placed 3rd of 300 undergraduate teams on an HR-themed challenge; built a buddy-system onboarding app with NLP-driven insights in two days

SKILLS

Languages

Python, Go, SQL, Bash, Java, JavaScript

Cloud & Infra

AWS, Azure, Google Cloud, Kubernetes, Docker, Terraform, Crossplane, Ansible, GitLab CI/CD

Data & ML

PostgreSQL, TimescaleDB, PostgreSQL Anonymizer, Elasticsearch, PyTorch, Ray/KubeRay

Network & Security

Cilium/Hubble, Falco, Tetragon, tc/netlink, Grafana, Prometheus, SAST/DAST, ISO 27001
